Topic

Workflow Automation using Deluge

Aim

To automate a business process in the Vehicle Service Request application built on Zoho Creator by configuring a form-based workflow using Deluge, such that a predefined action is triggered automatically whenever a record is created or edited in the Request Form, without requiring any manual intervention.

Procedure

Step 1: Open the Vehicle Service Request application in Zoho Creator and navigate to the application builder to add a new component.

Step 2: From the “Create New Component” screen, select **Workflow** as the component type to create an automation from scratch.

Step 3: On the trigger-selection screen (“When do you want to run your action?”), choose the “**On a form event**” option, since the automation must respond to changes made on the Request Form.

Step 4: On the workflow configuration screen (“Run workflow on any event in the form”), select the **Request Form**, choose the required Record Event and Form Event, name the workflow, and click **Create Workflow**.

Step 5: Once created, the workflow appears under **Form workflows** → **Repair Request Management**, attached to the Request Form with its configured action, and its status is verified to be **Enabled**.

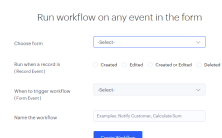

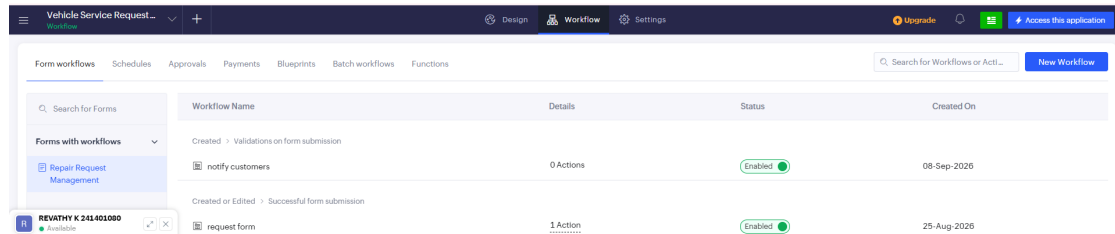

Fig. 3 – Configuring the workflow

Output

The workflow automation was configured and verified across the different automation modules available under the Workflow tab of the Vehicle Service Request application, as shown below.

1. Form Workflows

Under **Repair Request Management**, two form workflows are active: **notify customers**, triggered on *Created* → *Validations on form submission*, and **request form**, triggered on *Created or Edited* → *Successful form submission* with 1 configured action. Both workflows show a **Status** of **Enabled**, confirming that the Deluge-based actions will run automatically whenever their respective form events occur.

Workflow Name	Details	Status	Created On			
Created → Validations on form submission						
notify customers	0 Actions	Enabled	08-Sep-2026			
Created or Edited → Successful form submission						
request form	1 Action	Enabled	25-Aug-2026			

Fig. 4 – Form workflows “notify customers” and “request form”, both Enabled

2. Schedules

A custom schedule named **daily report** was created to run at a fixed time (08-Sep-2026, 11:20:13) with 0 actions currently configured. Its status is shown as **Disabled**, indicating that time-based (scheduled) automation was also explored, though not activated for regular execution.

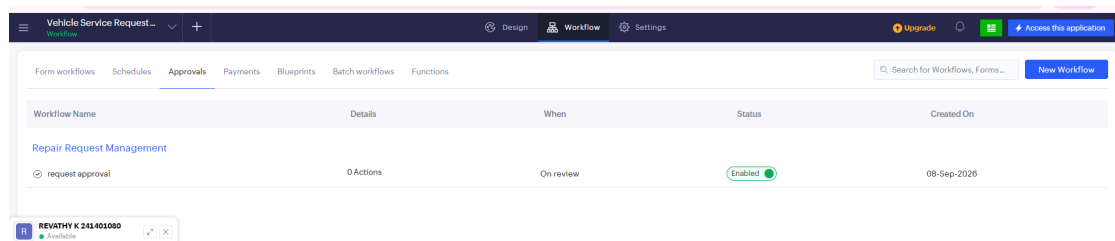

Form workflows	Schedules	Approvals	Payments	Blueprints	Batch workflows	Functions
Search for Workflows, Forms...						
New Workflow						
Workflow Name	Details	When	Status	Created On		
Custom Schedules						
daily report	0 Actions	08-Sep-2026 : 11:20:13	Disabled	08-Sep-2026		

Fig. 5 – Custom schedule “daily report” listed under Schedules (Disabled)

3. Approvals

Under **Repair Request Management** → **Approvals**, a **request approval** workflow is configured to run “On review”, with its status set to **Enabled**. This demonstrates that, besides simple form-event actions, approval-based automation was also successfully set up so that records can be routed for review as part of the process.

Form workflows	Schedules	Approvals	Payments	Blueprints	Batch workflows	Functions

New Workflow						
Workflow Name	Details	When	Status	Created On		
Repair Request Management						
request approval	0 Actions	On review	Enabled	08-Sep-2026		

Fig. 6 – Approval workflow “request approval”, Enabled and set to run “On review”

Result

Workflow automation was successfully implemented and verified in the Vehicle Service Request application using Zoho Creator's Deluge-based workflow builder. Form-event workflows (“notify customers” and “request form”) and an approval workflow (“request approval”) were created and enabled, and a scheduled automation (“daily report”) was configured, together demonstrating that business processes in the application can be automated to run without manual intervention, whether triggered by form events, review stages, or scheduled times.
